Лабораторная работа №3

Процедуры, функции, триггеры в PostgreSQL

Выполнил:

студент 2 курса ИКТ группа К32392,
Елистратов Владимир Дмитриевич

Проверила:

Говорова Марина Михайловна

Цель работы:

Овладеть практическими создания и использования процедур, функций и триггеров в базе данных PostgreSQL.

Вариант 17. БД “Телефонный провайдер ”

Информационная система служит для хранения информации об абонентах телефонной компании и для учета оплаты всех видов услуг абонентами.

Практическое задание:

Вариант 2

- Создать процедуры/функции согласно индивидуальному заданию и (согласно индивидуальному заданию, часть 4).
- Создать авторский триггер по варианту индивидуального задания.
- Модифицировать триггер (триггерную функцию) на проверку корректности входа и выхода сотрудника (см. Практическое задание 1 Лабораторного практикума (Приложение)) с максимальным учетом «узких» мест некорректных данных по входу и выходу.

Создание процедур\функций

1. Вывести список всех звонков заданного абонента

Текст запроса:

--1--

```
CREATE OR REPLACE FUNCTION getCalls(person_name text)
```

```
RETURNS TABLE(CallID text)
```

```
LANGUAGE SQL
```

```
AS $$
```

```
    (SELECT Call."ID" FROM "Call" as Call
```

```
    Left Join public."Treaty" as Tr ON Call."TreatyID" = Tr."ID"
```

```
    WHERE Tr."FullNameID" = person_name)
```

```
$$;
```

--end--

Создание и результат выполнения функции:

```
Test=# CREATE OR REPLACE FUNCTION getCalls(person_name text)
Test=# RETURNS TABLE(CallID text)
Test=# LANGUAGE SQL
Test=# AS $$
Test$#  (SELECT Call."ID" FROM "Call" as Call
Test$#   Left Join public."Treaty" as Tr ON Call."TreatyID" = Tr."ID"
Test$#   WHERE Tr."FullNameID" = person_name)
Test$#  $$;
CREATE FUNCTION
Test=# SELECT * FROM getCalls('S000000005');
      callid
-----
C0000000012
C0000000006
(2 строки)

Test=#
```

2. Вывести задолженность по оплате для заданного абонента.

Текст запроса:

```
CREATE OR REPLACE FUNCTION getPersonCreditValue(person_name text)
RETURNS TABLE (PersonCreditValue text)
LANGUAGE SQL
AS $$
SELECT CallCredit."sum"+RateCredit."sum" FROM
    ((SELECT sum(Call."Price"::numeric) FROM public."Treaty" as Tr
        LEFT JOIN public."Call" as Call ON Call."TreatyID" = Tr."ID" and
        Call."PaymentState"='false'
        WHERE Tr."FullNameID" = person_name
    ) LIMIT 1) as CallCredit ,
    ((SELECT sum("Rate"."BasePrice"::numeric) FROM public."Treaty" as Tr
        Left Join "Treaty_Rate" as T_R ON T_R."TreatyID" = Tr."ID" and
        T_R."LastMonthPayStatus"='false'
        Left Join "Rate" ON T_R."RateID" = "Rate"."RateID"
        WHERE Tr."FullNameID" = person_name
    ) LIMIT 1) as RateCredit
$$;
```

Создание и результат выполнения функции:

```
Test=# CREATE OR REPLACE FUNCTION getPersonCreditValue(person_name text)
Test=# RETURNS TABLE (PersonCreditValue text)
Test=# LANGUAGE SQL
Test=# AS $$
Test$# SELECT CallCredit."sum"+RateCredit."sum" FROM
Test$# ((SELECT sum(Call."Price"::numeric) FROM public."Treaty" as Tr
Test$# LEFT JOIN public."Call" as Call ON Call."TreatyID" = Tr."ID" and Call."PaymentState"='false'
Test$# WHERE Tr."FullNameID" = person_name
Test$# ) LIMIT 1) as CallCredit ,
Test$# ((SELECT sum("Rate"."BasePrice"::numeric) FROM public."Treaty" as Tr
Test$# Left Join "Treaty_Rate" as T_R ON T_R."TreatyID" = Tr."ID" and T_R."LastMonthPayStatus"='false'
Test$# Left Join "Rate" ON T_R."RateID" = "Rate"."RateID"
Test$# WHERE Tr."FullNameID" = person_name
Test$# ) LIMIT 1) as RateCredit
Test$# $$;
CREATE FUNCTION
Test=# SELECT * FROM getPersonCreditValue('S0000000005')
Test=# ;
 personcreditvalue
-----
 99.00
(1 строка)

Test=#
```

3. рассчитать общую стоимость звонков по каждой зоне за истекшую неделю.

Текст запроса:

```
CREATE OR REPLACE FUNCTION getZoneCallPrice()
```

```
RETURNS TABLE (ZoneName text, ZoneCode text, SumPrice numeric)
```

```
LANGUAGE SQL
```

```
AS $$
```

```
SELECT Distinct ZN."ZoneName", Zn."ZoneCode", sum(Call."Price") FROM "Zone" as Zn
```

```
LEFT JOIN public."Call" as Call ON Zn."ZoneCodeID" = Call."ZoneCodeID" and
```

```
Call."StartCallDate" BETWEEN NOW() - interval '7 day' and NOW()
```

```
Group By Zn."ZoneCodeID"
```

```
$$;
```

Создание и результат выполнения функции:

```
Test=# CREATE OR REPLACE FUNCTION getZoneCallPrice()
Test=# RETURNS TABLE (ZoneName text, ZoneCode text, SumPrice numeric)
Test=# LANGUAGE SQL
Test=# AS $$
Test$$ SELECT Distinct ZN."ZoneName", Zn."ZoneCode", sum(Call."Price") FROM "Zone" as Zn
Test$$ LEFT JOIN public."Call" as Call ON Zn."ZoneCodeID" = Call."ZoneCodeID" and
Test$$ Call."StartCallDate" BETWEEN NOW() - interval '7 day' and NOW()
Test$$ Group By Zn."ZoneCodeID"
Test$$ $$;
CREATE FUNCTION
Test=# SELECT * FROM getZoneCallPrice();
 zonename | zonecode | sumprice
-----+-----+-----
 Belarus  | +375     |
 China    | +86      |
 Korea    | +82      |
 Russia   | +7       |
 Russia   | 8        |
(5 строк)

Test=#
```

Создание триггера

Создать триггер рассчитывающий стоимость звонка добавленного в БД

Текст запроса:

```
CREATE OR REPLACE FUNCTION SetCallPrice() RETURNS TRIGGER AS $my_table$

BEGIN

UPDATE "Call" SET "Price" =

        (SELECT tb."CallPrice" FROM

                (SELECT "Call"."ID", (((date_part('hour', "Call"."CallDuration") * 60) +
(date_part('minute', "Call"."CallDuration")) + (date_part('second', "Call"."CallDuration") /
60))::numeric * "Zone"."Coefficient" * ("Rate"."MinPrice")::numeric) as "CallPrice"

                        From "Call", "Rate", "Zone"

                                WHERE "Rate"."RateID" = "Call"."RateID" and "Zone"."ZoneCodeID"
= "Call"."ZoneCodeID" and "Call"."Price" is NULL

                                        AND new."ID" = "Call"."ID"

                                                ) AS tb)::numeric::money

        WHERE new."ID" = "Call"."ID" and "Call"."Price" is NULL;

Return NEW;

END;

$my_table$ LANGUAGE plpgsql;

CREATE OR REPLACE TRIGGER CallPriceAndPaymentCalc

AFTER INSERT on "Call"

FOR EACH row

WHEN (NEW."Price" is NULL)

EXECUTE PROCEDURE SetCallPrice();
```

Создание триггера и вспомогательной функции:

```
Test=# CREATE OR REPLACE FUNCTION SetCallPrice() RETURNS TRIGGER AS $my_table$
Test$# BEGIN
Test$# UPDATE "Call" SET "Price" =
Test$# (SELECT tb."CallPrice" FROM
Test$# (SELECT "Call"."ID", (((date_part('hour', "Call"."CallDuration") * 60) + (date
_part('minute', "Call"."CallDuration"))) + (date_part('second', "Call"."CallDuration") / 60))::numeric
* "Zone"."Coefficient" * ("Rate"."MinPrice")::numeric) as "CallPrice"
Test$# From "Call", "Rate", "Zone"
Test$# WHERE "Rate"."RateID" = "Call"."RateID" and "Zone"."ZoneCodeID" = "Cal
l"."ZoneCodeID" and "Call"."Price" is NULL
Test$# AND new."ID" = "Call"."ID"
Test$# ) AS tb)::numeric::money
Test$# WHERE new."ID" = "Call"."ID" and "Call"."Price" is NULL;
Test$# Return NEW;
Test$# END;
Test$# $my_table$ LANGUAGE plpgsql;
CREATE FUNCTION
Test=#
Test=# CREATE OR REPLACE TRIGGER CallPriceAndPaymentCalc
Test=# AFTER INSERT on "Call"
Test=# FOR EACH row
Test=# WHEN (NEW."Price" is NULL)
Test=# EXECUTE PROCEDURE SetCallPrice();
CREATE TRIGGER
Test=#
```

Внесем в таблицу 14 звонков
Запрос и результат его выполнения без триггера:

```
TEST2=# INSERT INTO public."Call" (
TEST2=# "ID", "ZoneCodeID", "RateID", "TreatyID", "Treaty_Rate_ID", "TargetPnOneNumber", "StartCallDate", "CallDuration", "PaymentState", "PaymentDate", "DateOfActualPayment")

Модификация триггера из практической работы

```
1 CREATE OR REPLACE FUNCTION fn_check_time_punch() RETURNS TRIGGERS AS $psql$  
2 DECLARE prev tp RECORD;  
3 BEGIN  
4     SELECT punch_time, is_out_punch INTO prev_tp  
5     FROM time_punch  
6     WHERE employee_id = new.employee_id  
7     ORDER BY punch_time DESC  
8     LIMIT 1;  
9     IF prev_tp IS NULL THEN RETURN new;  
10    END IF;  
11    IF prev_tp.is out punch = new.is_out_punch  
12    OR prev_tp.punch time >= new.punch_time  
13    OR new_punch_time > now()  
14    THEN RETURN NULL;  
15    END IF;  
16    RETURN new;  
17 end;  
18 $psql$ language plpgsql;
```

Выводы:

В процессе выполнения данной лабораторной работы удалось овладеть навыками написания и использования процедур, функций и триггеров в PSQL. Функции и процедуры SQL имеют схожесть с языками программирования, но очень неудобны и ограничены. Простейшие задачи могут вызывать трудности из-за синтаксиса и невозможности выполнить некоторые действия.
